

Security Assessment

It's important to establish a baseline and close existing vulnerabilities. When was your last assessment?

Date: _____

Spam Email

Secure your email. Most attacks originate in your email. We'll help you choose a service designed to reduce spam and your exposure to attacks on your staff via email.

Passwords

Apply security policies on your network. Examples: Deny or limit USB file storage access, enable enhanced password policies, set user screen timeouts, and limit user access.

Security Awareness

Train your users - often! Teach them about data security, email attacks, and your policies and procedures. We offer a web-based training solution and "done for you" security policies.

Did you know?

1 in 5 Small businesses will suffer a cyber breach this year.

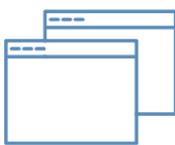

81% Of all breaches happen to small and medium sized businesses.

97% Of breaches could have been prevented with today's technology.

Advanced Endpoint Detection & Response

Protect your computers adata from malware, viruses, and cyber-attacks with advanced endpoint security. The latest technology (which replaces your outdated anti-virus solution) protects against file-less and script-based threats and can even rollback a ransomware attack.

Multi-Factor Authentication

Utilise Multi Factor Authentication whenever you can, include on your network, banking websites, and even social media. It adds an additional layer of protection to ensure that even if your password does get stolen, your data stays protected.

Computer Updates

Keep Microsoft, Adobe, and Java products updated for better security. We provide a "critical update" service via automation to protect your computers from the latest known attacks.

Dark Web Research

Knowing in real-time what passwords and accounts have been posted on the Dark Web will allow you to be proactive in preventing a data breach. We scan the Dark Web and take action to protect your business from stolen credentials that have been posted for sale.

SIEM/Log Management

Security Incident & Event Management uses big data engines to review all event and security logs from all covered devices to protect against advanced threats and to meet compliance requirements.

Web Gateway Security

Internet security is a race against time. Cloud based security detects web and email threats as they emerge on the internet and blocks them on your network within seconds – before they reach the user.

Mobile Device Security

Today's cyber criminals attempt to steal data or access your network by way of your employees' phones and tablets. They're counting on you to neglect this piece of the puzzle. Mobile device security closes this gap.

Firewall

Intrusion Detection and Intrusion Prevention features. Send the log files to a managed SIEM. And if your IT team doesn't know what they are, call us today!

Encryption

Whenever possible, the goal is to encrypt files at rest, in motion (think email) and especially on mobile devices.

Backup

Backup anywhere. Have a backup for each month of the year. Test your backups often. And if you aren't convinced your backups aren't working, call us ASAP.

CYBER SECURITY AS A SERVICE

Holistic (CSaaS) platform that enables enterprise grade security controls to be deployed, managed and upgrade across a global technology environment without the need for continuous investment in new hardware products that require time and resources to deploy.

Today's businesses are in a world where they're struggling to protect their data and networks which are constantly under fire from cyber threats day in and out.

The nature and sophistication of today's attacks are forcing businesses to implement security in a completely different way than they've approached before in the past. Simply put without the right protection and preventative measures in place, clients won't stand a chance in the ever-changing threat landscape.

To combat this challenge, Holistic IT have expanded its security portfolio, enabling us to offer businesses enhanced security features ready to fight these new digital threats.

Tomorrow's Threats Require a New Enterprise Security Paradigm

Holistic IT (CSaaS):

REAL TIME - Endpoint Protection

Multiple patented AI algorithms protect against the widest array of threat vectors. Eliminate dependency on connectivity, cloud latency, and human intervention. On-device AI prevents known and unknown threats in real time.

ACTIVE - Detection & Response

Devices self-defend and heal themselves by stopping processes, quarantining, remediating, and even rolling back events to surgically keep endpoints in a perpetually clean state. Hunt more and pivot less.

CLOUD DELIVERED – IoT Discovery & Control

Holistic IT's (CSaaS) transforms every device into a sentinel, mapping and enforcing the enterprise IoT footprint. Hunt rogue devices, ensure vulnerability hygiene, and segment devices with dynamic policies.

IDENTITY & PASSWORD MANAGEMENT

Secure your passwords to prevent data breaches and improve employee productivity. Use fine-grained access with robust reporting and auditing tools to enforce internal controls and maintain compliance standards.

Protect your organisation against cyber attacks

Cyber Essentials can guard you against the most common cyber threats and demonstrate your commitment to cyber security, let Holistic IT get you Cyber Essentials accredited.
